Senco® Introduces JoistPro™ 150 and 250 Metal Connector Nailers
Durable, Lightweight Tools Drive Fasteners into Tough Substrates with Pinpoint Accuracy and Speed for Maximum Productivity

CINCINNATI (December 7, 2011) -- Senco, the leader in professional power fastening technology, announces the introduction of its new JoistPro metal connector nailers.

Available in February 2012, this class of nailers drives 1-1/2" to 2-1/2" long by .131" to .162" diameter 34° collated nails through holes in metal hardware with pinpoint accuracy and speed. Applications include fastening joist hangers, seismic and hurricane ties, post bases and caps, foundation caps and other metal framing hardware.

Lightweight, ergonomically balanced, and competitively priced, Senco's compact, single shot metal connector nailers are a welcome addition to the category. Two models are available: the JoistPro 150, a dedicated 1-1/2" tool, and the JoistPro 250 for nails up to 2-1/2" long.

Both models feature innovative nosepiece designs for quick, safe, precise nail placement, and pack enough power to deliver a flush drive on the toughest substrates, including engineered lumber.

JoistPro 150

The JoistPro 150 fires a single strip of 1-1/2" paper tape collated nails ranging from .131" to .148" in diameter. The tool nose exposes each nail tip before it fires for exact placement into the pre-punched holes. A dry-fire lockout prevents blank driving and signals the user when it's time to reload fasteners.

At 10.4" tall and weighing 4.6 pounds, the JoistPro 150 is smaller and lighter than competitor models, making it ideal for navigating tight spaces and hard-to-reach areas, as well as working comfortably overhead. The tool's short, slightly offset magazine fits conveniently into 90° angled corners for added maneuverability. A

full comfort grip reduces fatigue and minimizes slipping to maintain firm control in humid conditions. Other convenience features include a tool-free 360° adjustable exhaust that directs blow-back out and away from the user and an adjustable rafter hanger.

MSRP: \$219

JoistPro 250

Senco's more powerful JoistPro 250 fires a single strip of 1-1/2" to 2-1/2" paper tape collated nails ranging from .131 to .162 in diameter.

The tool uses an integral nosepiece probe to locate the metal connector holes for accurate placement. When the tool is fired, the tip moves out of the way, allowing the lever to guide the nail directly into the hole. The rear load magazine captures the fastener by the head so there is no need to adjust anything when switching between nail lengths.

Designed for heavy-duty use, and weighing nearly two pounds less than its closest competitor, the JoistPro 250 has many similar features to the 150, including a full comfort grip, a 360° adjustable exhaust, dry-fire lockout and an adjustable rafter hanger, with the addition of a dedicated belt hook on the side.

MSRP: \$299

The JoistPro 150 and 250 will be available from Senco distributors. For locations, visit <http://www.senco.com>.
