Pilot Point Sheathing Screw

Sheathing to metal fastener

APPLICATIONS

- Sheathing to steel (20ga - 12ga)

FEATURES AND BENEFITS

- Square recess provides excellent torque transmission for high torque applications
- Flat head provides strong holding power for most wood applications
- Fine threads provide improved holding power and thread-forming capability when driving into heavy steel
- The pilot drill tip provides a tight connection while eliminating the need to pre-drill by drilling a hole before the threads engage. This prevents the top layer from riding up the threads during the drilling process leaving a gap between the two layers (commonly referred to as jacking)
- Clear zinc finish

INSTALLATION GUIDELINES

- Use a screwdriver with a precise depth-sensitive clutch and speeds of up to 2500 RPM
- Overdriving may cause a weak connection or thread strip-out of the steel
- The drive in finished when the screw is just below the work surface
- Three full threads must extend past the base metal for an acceptable connection
